Kinder Shapes

Last week I visited the mighty Kindergarten students who were making sense of the world through interaction with their teachers.

The Kindergarten children were exploring three dimensional shapes via an interactive whiteboard program where they named the different shapes. You could see the children engage in problem-solving and classifying shapes that rolled and or slid and those that have edges and round sides.

After exploring the shapes in their classroom, the children worked on grouping smaller shapes by their specific characteristics. It was poetry in motion, to see the children engaged in their natural curiosity, building on their new found knowledge whilst internalising what they have learned in collaboration with others.

A most enjoyable time! Kindergarten is truly the engine room of St Patrick’s Primary School!
